<p>Death-ability: Helping people with intellectual disability understand dying and death</p>	<p>The University of Sydney is being funded to develop the Online Toolkit for Carers and Practitioners Helping People with Intellectual Disability Understand Dying and Death. The Toolkit aims to provide carers and practitioners with information, evidence, resources and confidence to discuss dying and death with people with intellectual disabilities.</p> <p>The toolkit is expected to be launched in Autumn 2018.</p>	<p>Researchers from the University of Sydney, Western Sydney University, HammondCare and Flinders University, together with Unisson Disability, have worked with CareSearch to develop an online training toolkit. The kit gives carers and practitioners the skills, knowledge, resources and confidence to help people with intellectual disability understand the end of life, and make plans for it if they choose.</p> <p>The toolkit comprises 12 modules on topics including what death is, funeral wishes, and bequeathing. Each module contains individual stories, video examples, practical tips, resources, and links to available research that underpins the content.</p>

Medical Goals of Care Plan	Tasmanian Government / Dept of Health and Human Services Specialist Palliative Care Service	<p><a href="http://www.dhhs.tas.gov.au/palliativecare/health_professionals/goals_of_care">http://www.dhhs.tas.gov.au/palliativecare/health_professionals/goals_of_care</a></p> <p><i>The Medical Goals of Care Plan is a key component of the Healthy Dying Initiative. It has been implemented Statewide.</i></p> <p>The aim of the Medical Goals of Care Plan is to ensure that patients who are unlikely to benefit from medical treatment aimed at cure, receive care appropriate to their condition and are not subjected to burdensome or futile treatments. In particular this concerns cardiopulmonary resuscitation and Medical Emergency Team (MET) calls, which may otherwise occur if the patient's condition deteriorates. A set of <a href="#">Principles - Medical Goals of Care (GOC) Plan</a> underlines this aim.</p> <p>The Medical Goals of Care Plan is an assessment tool which should be completed for all patients being admitted to the hospital. Day admissions for low risk procedures on otherwise healthy people may be exempted at the discretion of the admitting Consultant. Where possible the goal of care should be informed by discussion with the patient, or their Person Responsible, or by an Advance Care Directive. However the final decision about care is always a clinical one.</p> <p>The Consultant or Specialist responsible for the patient's care, or their designated delegate, (Registrar or RMO) is responsible for completing and signing the Medical Goals of Care Plan form, authorising any changes, contacting the patient's GP, and endorsing the form for out-of-hospital use.</p> <p><a href="#">View a flowchart</a> of decision-making involved in implementing the Medical Goals of Care Plan.</p> <p>Decision-making is based on determining the appropriate phase of care according to a realistic assessment of the probable outcomes of medical treatment at this stage of their illness. The phases are: curative, palliative and terminal. Patients may move from one phase to another. For some patients cure is never an option even at presentation, while other patients only present in the terminal phase.</p>

		<p>A step by step <a href="#">Guidance Notes - Completion of Medical Goals of Care Plan</a> provides key clinical questions which may be asked when assessing a patients' presentation and outlook.</p> <p><a href="#">View example of the Medical Goals of Care Plan form</a></p> <p>For GPs: <a href="#">Primary Health Tasmania - Medical Goals of Care (GOC) Plan Templates</a></p>

<a href="#">Supportive and Palliative Care Indicators Tool SPICT</a>		 SPICT.pdf  The SPICT™ is used to help identify people at risk of deteriorating and dying with one or multiple advanced conditions for holistic, palliative care needs assessment and care planning.
<a href="#">The Advance Project</a>	Initiating palliative care and advance care planning through training and resources for primary and chronic/complex care clinicians	The project will be run by HammondCare to implement training to develop clinicians' skills in initiating conversations about ACP and screening for PC needs, facilitate earlier attention to ACP and palliative/supportive care in primary and chronic/complex care settings, and enable clinicians in these settings to more efficiently address patients and caregivers' identified needs and concerns about ACP and PC.
The Australian Carer Toolkit for Advanced Disease	Helping family carers to support a relative or friend with advanced disease	St Vincent's Hospital Melbourne is being funded to develop <i>The Australian carer toolkit for advanced disease</i> which aims to help Australian family carers to support a person with advanced disease by providing access to high quality information via a national e-health toolkit. The toolkit also aims to enhance carers' psychosocial wellbeing, thereby fostering 'successful' home care.
<a href="#">The Groundswell Project</a>		The Groundswell Project is a not for profit organisation known for using innovative arts and health programs to create social and cultural change about death and dying (Dying to Know & Compassionate Communities)
Whereto Research – GP Best Practice Research Project		<p>In 2016, the Department engaged Whereto Research to undertake a study into awareness, attitudes and provision of best practice palliative care within General Practice. The project was completed in March 2017.</p> <p>The study identified that GPs are interested in learning more about palliative care and would like local sources of information and easily absorbed and applied resources.</p> <p>Findings from this research were disseminated through Primary Health Networks and will inform future policy.</p> <p>For further information about the findings the final report is available here.</p> <p>PDF version: <a href="#">Research into awareness, attitudes and provision of best practice advance care planning, palliative care and end of life care within general practice - PDF 1027 KB</a></p> <p>Word version: <a href="#">Research into awareness, attitudes and provision of best practice advance care planning, palliative care and end of life care within general practice - Word 5290 KB</a></p>
